

PRIYANSHU GAUTAM

SOFTWARE DEVELOPMENT ENGINEER III | CONTENT PLATFORMS | DISTRIBUTED SYSTEMS | AGENTIC AI

Gurugram, India • +91 8376027957 • priyanshugautam1997@gmail.com • linkedin.com/in/pr1yanshu • pr1yanshu.github.io • github.com/Pr1yanshu

Backend engineer with 7+ years building high-scale distributed systems across travel and crypto. Specializes in Kotlin/Java/Go microservices, content ingestion and ETL, Kafka/gRPC platforms, and production-oriented agentic tooling. Combines hands-on service development with backend design, performance engineering, and production delivery.

MILLIONS on-chain events | 5X production load | 50% lower latency | 38% faster home screen | 11% cross-sell uplift

EXPERIENCE

Software Development Engineer III | Expedia Group Apr 2026 - Present

- Build content-domain backend services and Spring Batch ETL pipelines in Kotlin for third-party travel-content ingestion at scale.
- Shape backend designs and service boundaries for ingesting, transforming, and serving heterogeneous partner content across content-domain systems.
- Develop and maintain microservices that address provider-specific ingestion challenges while supporting reusable, scalable content-processing flows.
- Apply agentic tooling, reusable AI skills, prompt engineering, and plugin integrations to automate reasoning, extraction, and engineering tasks across backend workflows.

Senior Software Engineer | CoinDCX Jun 2022 - Mar 2026

- Built a Go blockchain-scanner microservice processing millions of on-chain events through Kafka; reduced processing latency through concurrency and targeted optimizations.
- Built the exchange-broker microservice from scratch for third-party exchange order placement using Go, gRPC, Protobuf, and Confluent Kafka.
- Stabilized high-volume market-data services, added cross-service E2E tests, and partnered with DevOps on CI/CD and staging/performance infrastructure.
- Identified infrastructure bottlenecks through end-to-end performance testing and hardened services for resilience under sustained market-data load.
- Load-tested and productionized infrastructure for 5x traffic; delivered 50% lower latency, 8x better stability, and a 30% quarterly revenue lift.

Software Engineer | Goibibo (GO-MMT Group) Jul 2019 - Jun 2022

- Built the RESTful streaming backend powering personalized home-screen cards, cutting load time 38% (over 800 ms to under 500 ms) while enabling real-time card configuration.
- Created a config-driven cross-sell engine that increased shoppers across lines of business by 11%.
- Enabled product teams to change card ordering and cross-sell placements through configuration rather than application releases.
- Designed a unit-testing and mocking framework and integrated it into the deployment pipeline with DevOps.

TECHNICAL SKILLS

Languages: Kotlin, Go, Java, Node.js/TypeScript, SQL

Backend: Spring Batch, Spring Boot, microservices, REST, gRPC, Protobuf

Data & messaging: Kafka, PostgreSQL, MongoDB, Redis, ETL and content-ingestion pipelines

AI engineering: LLM integration, agentic tooling, prompt engineering, reusable AI skills, plugin integration

Platform: Docker, Git, CI/CD, Sumo Logic, testing and performance engineering

EDUCATION & RECOGNITION

B.E., Computer Science & Engineering | Netaji Subhas Institute of Technology (NSIT), 2015 - 2019 | GPA: 7.2/10

Recognition: Super Satoshi (CoinDCX); Ace Performer of the Quarter and 2x GoTripper of the Month (GO-MMT).

PERSONAL PROJECTS & ACADEMIC WORK

Ratelt - Personal ML project that predicts unseen-film ratings from a user's prior preferences. Built the stacked-autoencoder architecture and training workflow in PyTorch; source available on GitHub.

Lines App - Android learning app that teaches children lines and alphabets, using Tesseract OCR to detect drawn characters. Academic project guided by Prof. Savita Yadav; published on Google Play.
